

# 1. Create a new target server for the test environment

## Create a new target server

1. On the left navigation menu, click **Admin > Environments > Target Servers**.
2. If it is not already selected, use the dropdown in the upper left to select the **test** environment.
3. Click **+Target server**.
4. Specify the following:

Property	Value
Enabled	<i>selected</i>
Name	<b>TS-Retail</b>
Host	<b>gcp-cs-training-01-test.apigee.net</b>
Port	<b>443</b>
SSL	<i>selected</i>

When the **SSL** box is selected, the dialog shows additional configuration fields. Accept their default values, and click **Add**.

5. Confirm that your values match the values in the image.

NAME▲	HOST	PORT	SSL	ENABLED
TS-Retail	gcp-cs-training-01-prod.apigee.net	443	✓	

## Optional: Repeat this process for the prod environment

1. Configure a new target server as you did in Task 1. Select the **prod** environment, and use the following:

Property	Value
Enabled	<i>selected</i>
Name	<b>TS-Retail</b>
Host	<b>gcp-cs-training-01-prod.apigee.net</b>
Port	<b>443</b>
SSL	<i>selected</i>
